Compliance statements

Disclaimer

This investor presentation has been prepared by Pilot Energy Limited ABN 86 115 229 984 (Pilot or the Company). Any material used in this presentation is only an overview and summary of certain data selected by the management of Pilot. The presentation does not purport to contain all the information that a prospective investor may require in evaluating a possible investment in Pilot nor does it contain all the information which would be required in a disclosure document prepared in accordance with the requirements of the Corporations Act and should not be used in isolation as a basis to invest in Pilot. Recipients of this presentation must make their own independent investigations, consideration and evaluation of Pilot. Pilot recommends that potential investors consult their professional advisor/s as an investment in Pilot is considered to be speculative in nature.

This presentation contains “forward looking statements” concerning the financial condition, results of operations and business of Pilot. All statements other than statements of fact or aspirational statements, are or may be deemed to be “forward looking statements”. Often, but not always, forward looking statements can generally be identified by the use of forward looking words such as “may”, “will”, “expect”, “intend”, “plan”, “estimate”, “anticipate”, “continue”, “outlook”, and “guidance”, or other similar words & may include, without limitation, statements regarding plans, strategies and objectives of management, future or anticipated production or construction commencement dates and expected costs, resources or reserves, exploration results or production outputs.

Assumptions and Forward Looking Statements

Forward looking statements are statements of future expectations that are based on management’s current expectations and assumptions, known and unknown risks and uncertainties that could cause the actual results, performance or events to differ materially from those expressed or implied in these statements. These risks include, but are not limited to price fluctuations, actual demand, currency fluctuations, drilling and production results, commercialisation reserve estimates, loss of market, industry competition, environmental risks, physical risks, legislative, fiscal and regulatory developments, economic and financial market conditions in various countries and regions, political risks, project delay or advancement, approvals and cost estimates.

Statements in this presentation are made only as of the date of this presentation unless otherwise stated & the information in this presentation remains subject to change without notice. Reliance should not be placed on information or opinions contained in this presentation. To the maximum extent permitted by law, Pilot disclaims any responsibility to inform any recipient of this presentation on any matter that subsequently comes to its notice which may affect any of the information contained in this document and presentation and undertakes no obligation to provide any additional or updated information whether as a result of new information, future events or results or otherwise.

No representation or warranty, express or implied, is made as to the fairness, accuracy, completeness or correctness of the information, opinions or conclusions contained in or derived from this presentation or any omission from this presentation or of any other written or oral information or opinions provided now or in the future to any person. To the maximum extent permitted by law, neither Pilot nor, any affiliates, related bodies corporate and their respective officers, directors, employees, advisors and agents (Relevant Parties), nor any other person, accepts any liability as to or in relation to the accuracy or completeness of the information, statements, opinions or matters (express or implied) arising out of, contained in or derived from this presentation or any omission from this presentation or of any other written or oral information or opinions provided now or in the future to any person

Competent Persons Statement

This announcement contains information on conventional petroleum and CO₂ Storage resources which is based on and fairly represents information and supporting documentation reviewed by Dr Xingjin Wang, a Petroleum Engineer with over 30 years’ experience and a Master in Petroleum Engineering from the University of New South Wales and a PhD in applied Geology from the University of New South Wales. Dr Wang is an active member of the SPE and PESA and is qualified in accordance with ASX listing rule 5.1. He is a former Director of Pilot Energy Ltd and has consented to the inclusion of this information in the form and context to which it appears.

Authorisation

This presentation has been authorized by the Chairman and Managing Director on behalf of the Board of Directors of Pilot Energy Limited

Acknowledgement of Country

We acknowledge the Traditional Custodians of the lands on which we meet today and their ongoing connection to lands, waters and communities.

We pay our respect to their culture and to Elders past, present and emerging.

Antonio Chrysostomou © 2016

Key messages

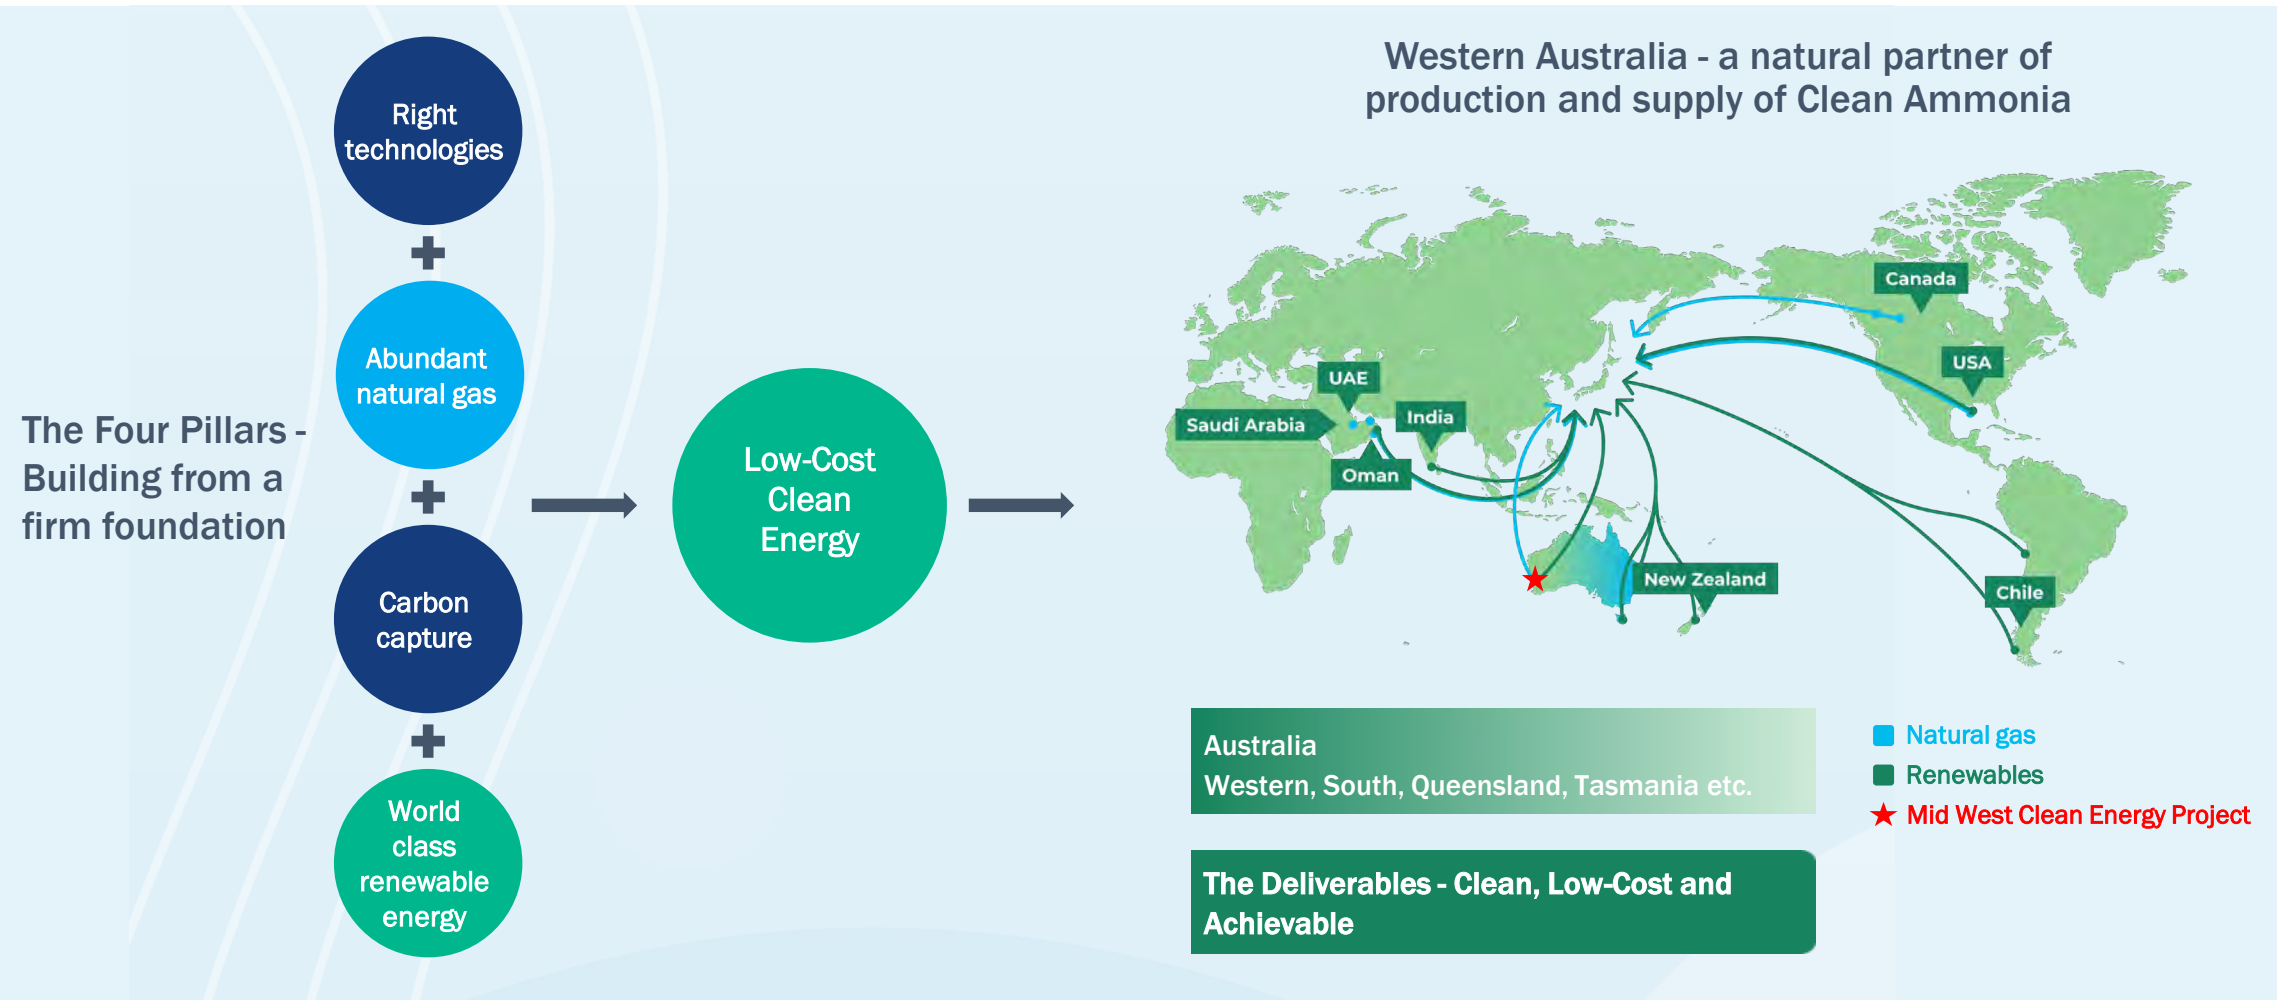

Mid West Clean Energy Project is an integrated carbon storage to Clean Ammonia export project

- Pilot is a producing oil and gas company transitioning to become a carbon-free energy producer and supplier
- The Mid West Clean Energy Project (MWCEP) is Pilot's flagship clean energy transition project
- This development is ideal for producing low-cost carbon-free energy for export and providing permanent carbon storage
- Ammonia (NH₃) is emerging as the ideal carbon-free energy transition fuel
- Ammonia produced with full carbon capture (FCC) and renewable power (RP) can be both clean and low-cost
- It can be produced at scale, supplied through existing supply chains and as an energy source is carbon-free
- The MWCEP will produce over 1 million tpa of Clean Ammonia for export to Korea from 2028
- Pilot also aims to provide up to 5 million tpa of permanent storage for Captured Carbon exports from Korea

There are substantial clean energy transition partnership opportunities between Australia and Korea

Strategy

Deliver low-cost clean energy by building off natural competitive advantages

Korea's energy landscape

Carbon-based energy dominates the landscape with Australia a leading carbon-based energy supplier

Figure 5. South Korea's coal imports and consumption, 2012–2021
million short tons

Figure 7. South Korea's installed electricity generating capacity by type, 2020

Figure 12. South Korea's coal imports by source, 2021

Korea

- Is the world's seventh-largest energy consumer;
- relies on imports to meet ~98% of its fossil fuel consumption;
- Is 3rd largest LNG importer in the world, after China & Japan;
- has the world's second-largest regassification capacity;
- main driver behind growth in gas demand is power generation;
- Fossil fuels accounts 2/3 of Korea's electricity generation

Australia is Korea's

- Largest LNG supplier at ~25% of all imports; and
- Largest coal supplier at ~49% of all imports

Figure 3. South Korea's natural gas imports and consumption, 2012–2021
billion cubic feet

Figure 4. South Korea's natural gas consumption by sector, 2012-2021
billion cubic feet per day

Figure 10. South Korea's LNG imports by source, 2022

Clean energy transition partnership opportunities

There are at least three near-term clean energy transition Australian-Korean partnership opportunities

Opportunity 1

Australia as Clean Ammonia producer and supplier

Opportunity 2

Australia as provider of permanent cross border carbon storage export destination

Opportunity 3

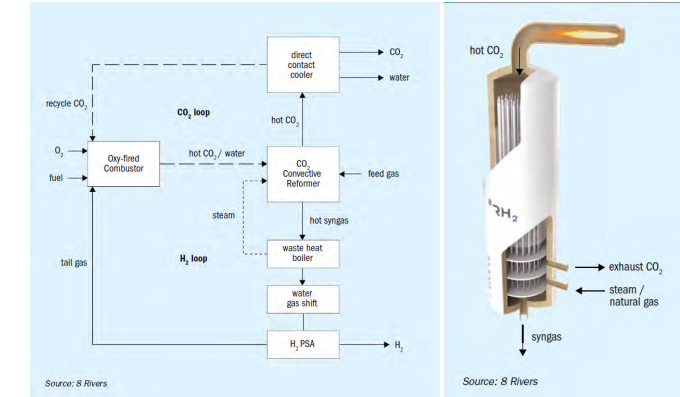

Korea as Clean Technology provider

KNCC 40 K LCO₂-EP with Submerged Turret OffLoading System

8 RIVERS

Mid West Clean Energy Project presents all these partnering options

A Clean Ammonia export project with full carbon capture through integrated CCS

Carbon Storage: Timing: ~2026

- **Targeting over 2.5 tpa CO₂ injection from 2026**
- Conversion of offshore oil field into permanent Carbon Storage Facility
- Continuous carbon injection capacity beyond 2050
- Plan to expand storage capacity to over 100 million tonnes
- Increase injection capacity to 5.0 million tpa enabling carbon imports
- Estimated levelized cost of storage (LCoS) less than \$20/tonne

Clean Ammonia Production: Timing: ~2029

- **Targeting Clean Ammonia production of over 1.0 million tpa**
- Clean Ammonia produced from conventional ATR with full carbon capture
- Full carbon capture will be provided by Cliff Head Carbon Storage Facility
- Ammonia plant to be fully powered by renewable power micro-grid
- Aim to produce Clean Ammonia with carbon-intensity of less than 0.1 kg

Opportunity 1 - Low-cost – cost competitive clean ammonia

Cliff Head Carbon Storage enables cost competitive industrial scale Blue Hydrogen production

Ammonia is produced through proven and well established, scalable technologies

- 95% of 190mtpa of global ammonia production is from natural gas

Ammonia production can be made virtually carbon free with direct/integrated CCS

- Ammonia production with carbon has been in commercial operation since 1982

Ammonia from natural gas with carbon capture is both a low cost and clean energy source

- Blue ammonia expected to be lowest-cost clean option¹

Excellent solution for transport and supply of hydrogen

- Ammonia excellent “vector” and lowest cost form of clean energy transport and supply

Established market and supply chain

- Well established, large-scale production and global supply chain

Clean Ammonia is a carbon-free energy source

- Clean Ammonia when can be used as a fuel with no carbon or other GHG emissions

Leigh Collins
Editor, Hydrogen Insight

Published 8 April 2024, 22:23

Samsung C&T has signed a 140bn-won (\$103m) contract to build facilities for unloading, storing and transporting ammonia at the controversial 2.1GW Samcheok coal-fired power plant in eastern South Korea.

Opportunity 1 - the carbon intensity comparison

Mid West Clean Energy Project exceeds current Clean H2 Carbon Intensity standards for EU, Japan, Korean & US

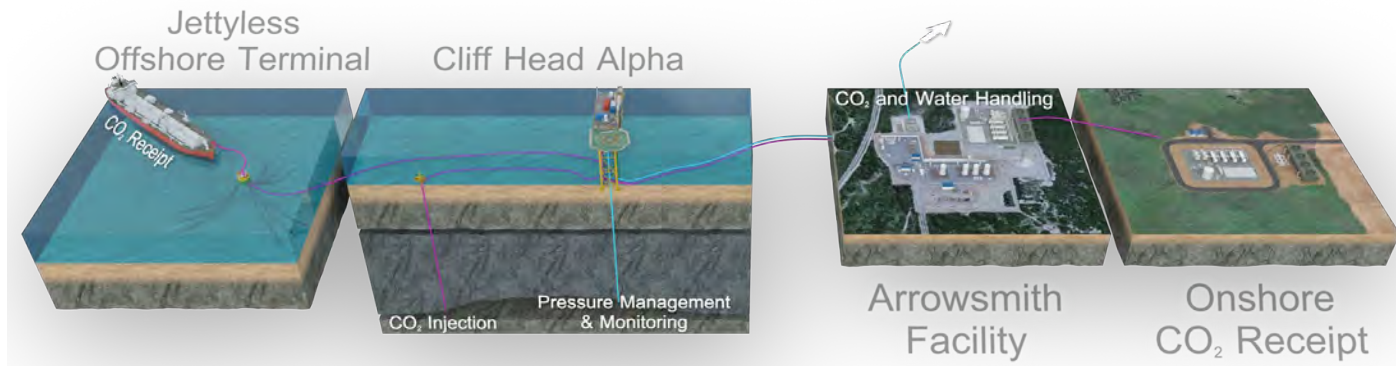

Combination of integrated CCS and behind-the-meter renewables delivers low Carbon intensity

*Sources: Argus Media article 18 April 2023 – South Korea outlines clean hydrogen certification system and Pilot Feasibility Study ASX release 28 March 2022, 8 Rivers Gen2 8RH2 Design Basis Scope 1 MWCEP ammonia emissions

Opportunity 2 - Permanent Carbon Storage facility

Cliff Head Carbon Storage Facility is a key enabler

- Cornerstone development project
- Enabler of Clean Ammonia production
- Brownfield re-development utilizing existing facilities
- Clear regulatory pathway and received first Commonwealth approval
- Minimal risk and capex requirements through re-use of existing reservoir & facilities
- Aiming to provide over 1 million tpa of Carbon storage continuing through 2050
- Levelized cost of storage (Capex + Opex + DeCom) less than A\$20/tonne
- Project cost of carbon offsets in 2026 ranges from A\$41-71/tonne (real)*
- Targeting first Carbon injection in 2026

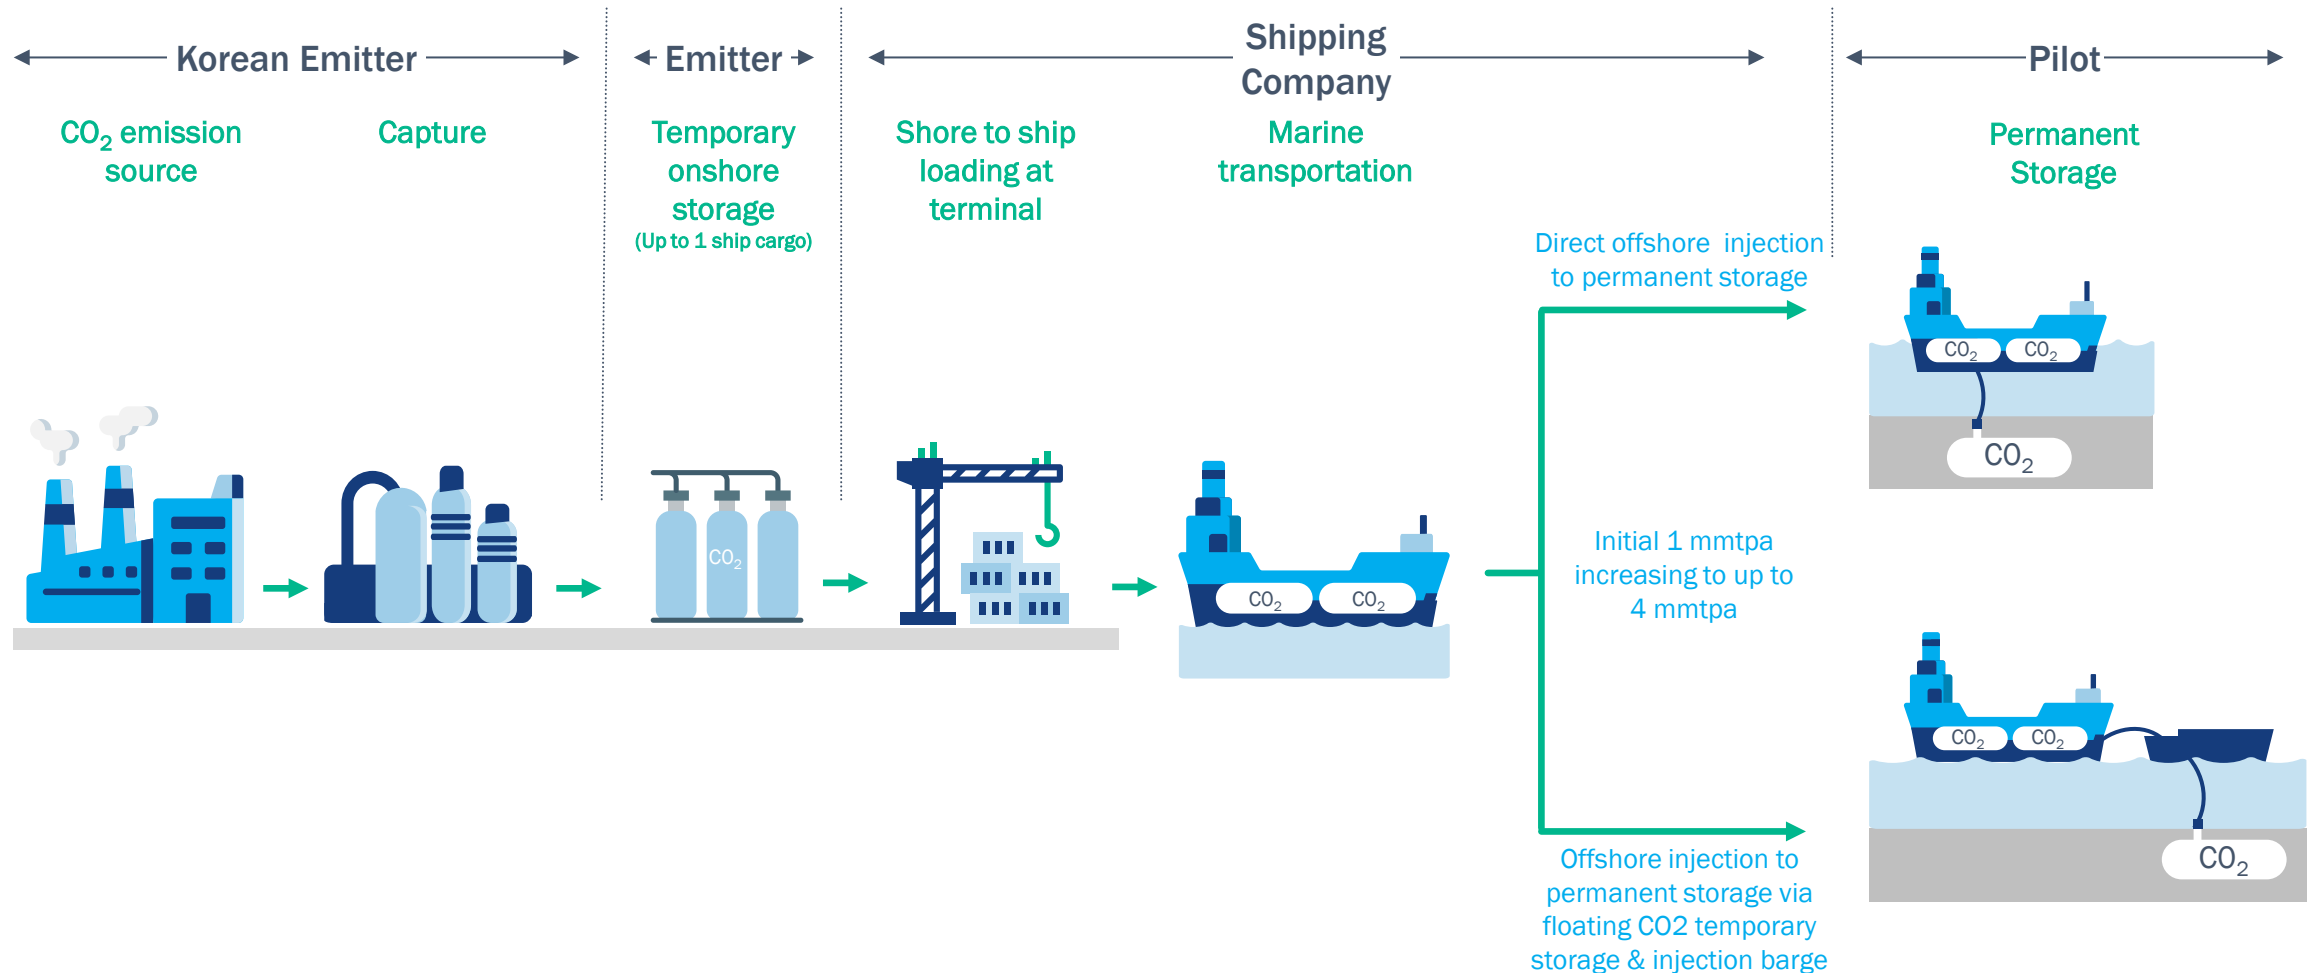

See Pilot Energy website for CCS Project video at

*Reputex Long-term Carbon Price Forecast March 2024

Opportunity 2 - Korea carbon capture to Cliff Head permanent storage

Putting it all together - a straight-forward solution opening the door to material CO₂ emissions reduction for Korea

Opportunity 3 – clean technologies – oxy-fuel / oxy-combustion

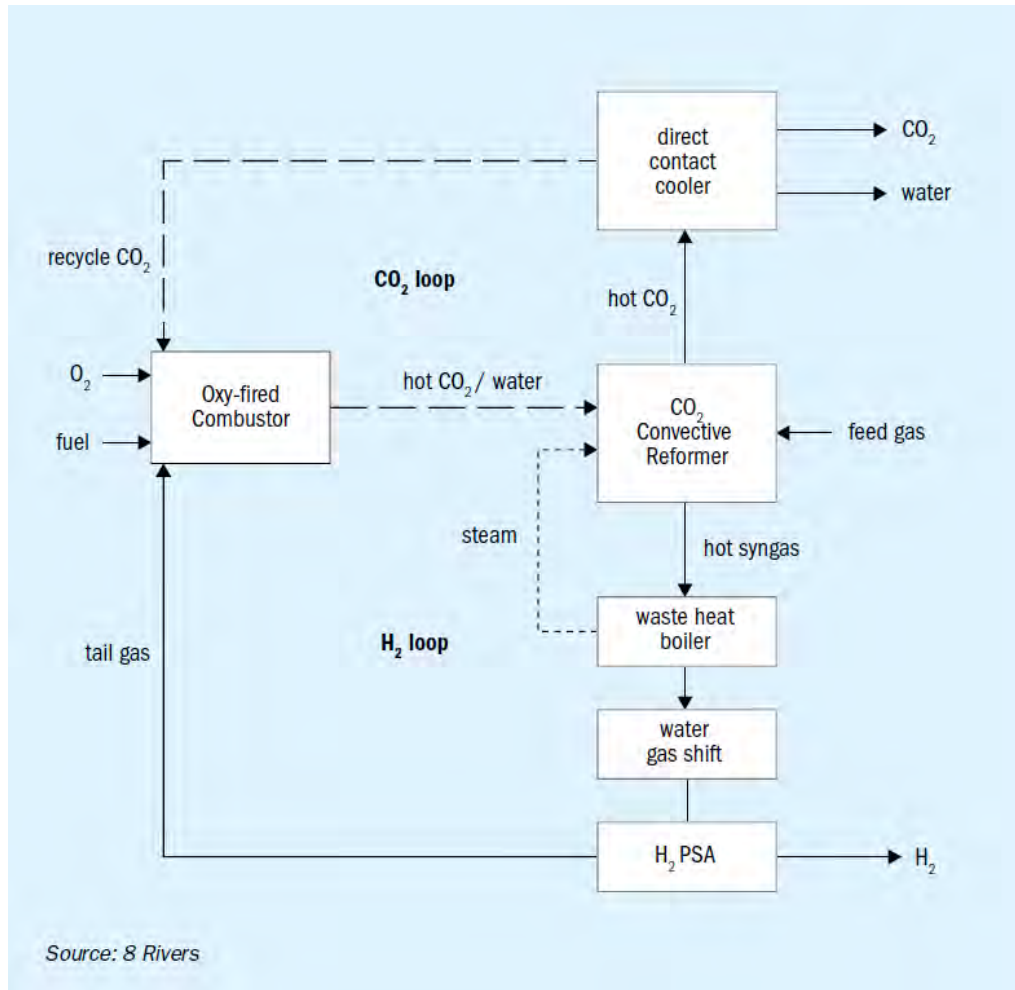

Re-powering existing LNG-fuelled power generation with AFC power generation can deliver substantial low-cost carbon abatement through zero-cost capture & low-cost marine carbon transport and storage

Repowering existing older LNG-fired power plants takes advantage of existing LNG supply chain, captures over 97% of CO₂ generated and delivers approximately 820,000 tpa reduction in carbon emissions per 300 MWe at 92.5% generating plant capacity factor

Opportunity 3 – clean technologies 8 Rivers blue hydrogen

CO₂ Convective Reformer (CCR) – Making CO₂ part of the solution delivers 99% capture at a lower cost*

- 8RH2 Convective CO₂ Reforming ("CCR") technology delivers improved natural gas-to-hydrogen generation efficiency with 99% CO₂ capture
- Conventional SMR/ATR process limited to 95% CO₂ capture
- 8RH2 CCR innovative use of high pressure/temperature CO₂ to drive reformation results in two separate flow streams like SMR at high pressure similar to ATR.
- CCR use of CO₂ as its working fluid enables inherent capture of 99% of produced CO₂
- CO₂ generated in Blue Hydrogen production is in supercritical form ready for storage without expense of SMR/ATR post combustion capture
- Pilot and 8 Rivers completing Pre-FEED basis of design study detailing use of CCR at MWCEP

2023 – Key achievements

Transition from feasibility to project development

Advanced regulatory approvals for the Project

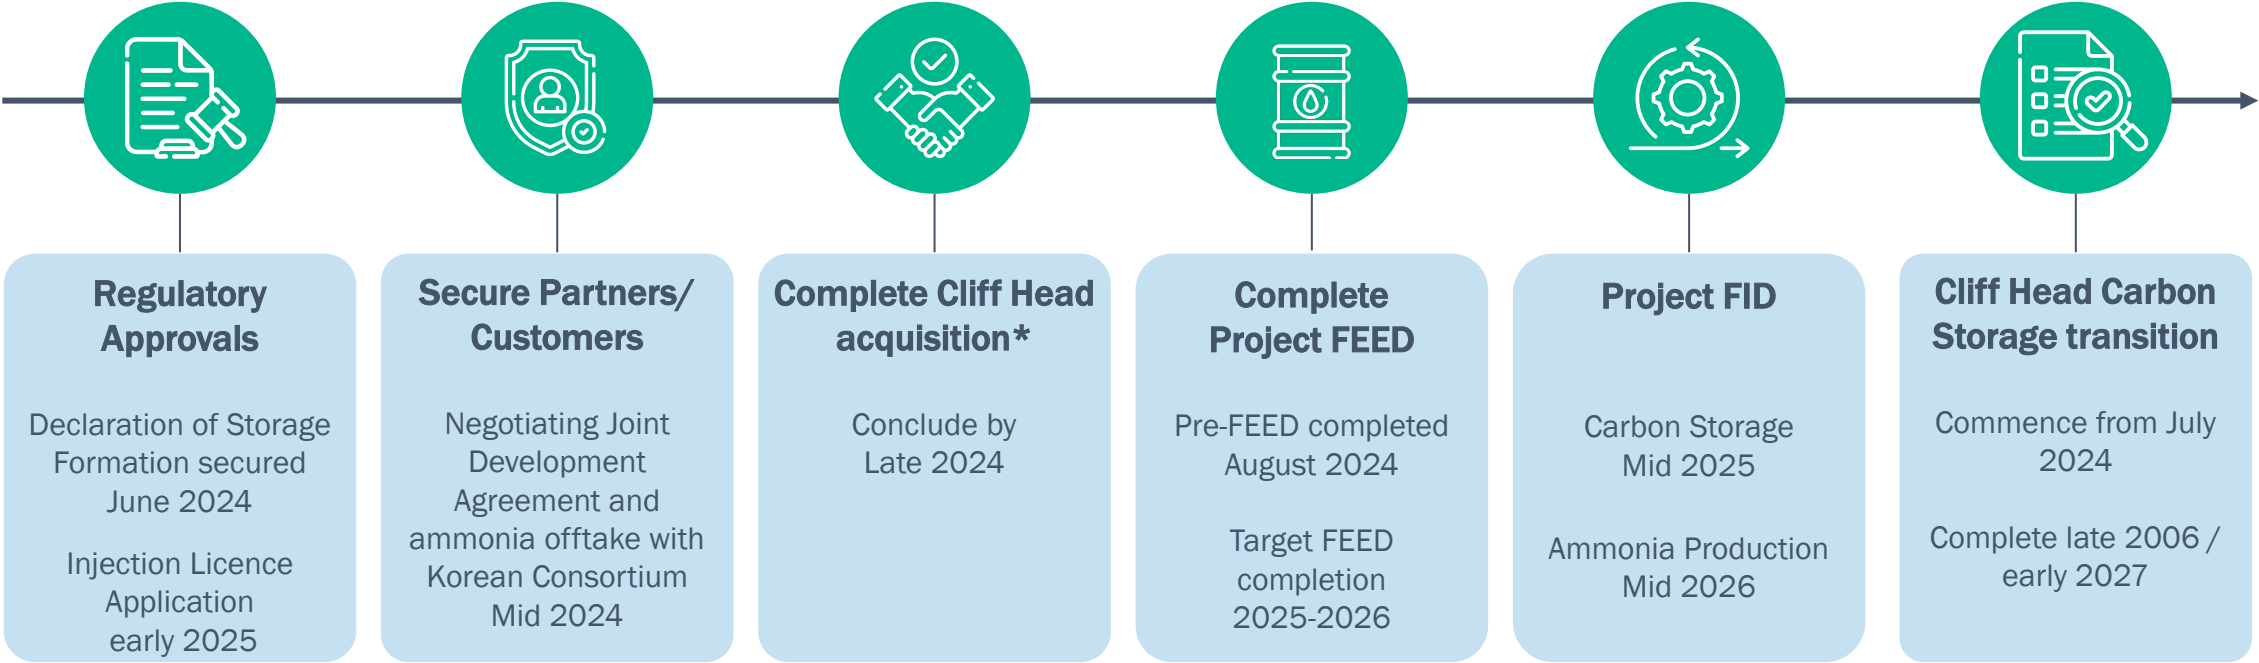

Key focus on locking in binding arrangements with Korean partners/customers

Funding and Capital Raising

2024/2025 MWCEP milestone targets

Notes:
*Source ASX announcement of 27 July 2023
Timeframes indicated above are estimates only and subject to change

Key next steps

Over the next 12-18 months Pilot will be focused on the activities to deliver the Cliff Head Carbon Storage Project

Corporate

- Conclude arrangements with prospective project partners & customers
- Conclude corporate and project funding arrangements

Project implementation

- Complete Permitting
- Secure binding Commercial Offtake
- Complete Carbon Storage and Ammonia Project FEED
- Commence prospective Engineering Procurement, Construction and Maintenance contractor engagement

Next 12 - 18 months aimed at securing necessary regulatory approvals, securing commercial off-take arrangements and completing a FEED to enable final investment decision (FID)
